SINUS Study for the Friedrich Ebert Foundation Social-ecological transformation

Country comparative Report

Teil der INTEGRAL-SINUS-OPINION Gruppe

Heidelberg, September 2023

Task and objectives

Empirical survey to identify opposing and advocating groups of the social-ecological transformation

- The world is in a state of far-reaching changes. There seems to be no end to reports of record heat, storms and forest fires. Climate policy has been dodged for a long time; progress must be made quickly in phasing out fossil fuels and building up an energy supply and industrial production based on renewable energy.
- At the same time, the pressure for change increasingly affects citizens directly. The path to a climate-neutral economy is associated with enormous technological, economic and social challenges: The accelerated expansion of renewable energy, the heat and transport transition, and the structural change of the economy all of this will increasingly affect citizens.
- Against this background, the SINUS Institute conducted a large-scale population survey in Europe and North America on behalf of the Competence Centre for Climate and Social Justice of the Friedich-Ebert-Stiftung: across 19 countries, the research delved into the perceptions, interests, and concerns that individuals associate with the social-ecological transformation. The survey's primary objective was twofold: first, to provide an encompassing overview of attitudes towards climate policy, and second, to explore the degree of receptivity among various social segments toward climate policy measures. To achieve the latter, the survey design incorporated the Sinus-Meta-Milieus target group model.
- The study results are intended to stimulate public discussions and provide an in-depth analysis of the conditions under which the climateneutral transformation of national economies can succeed and be supported by broad public acceptance. Based on these analyses, developing country- and milieu-specific communication strategies that address the population's different interests and fears and appropriately address them through suitable forms of communication is essential.

Table of contents

Method and sample

Problem awareness

- Importance of environmental, nature and climate protection
- Relevance of environmental policy fields of action
- Relevance of the topic climate change
- Attitudes towards climate change
- Consequences of climate change anxiety scale

03

Climate and environmentallyconscious behaviour

- Attitudes towards climate and environmentally conscious behaviour
- Barriers to climate and environmentally conscious behaviour
- Motivators of climate and environmentally conscious behaviour

Changing lifestyles and economies

- Assessing the need for change
- Attribution of responsibility
- Attitudes towards policies
- Attitudes towards the energy/heat transition

Interest in information and level of knowledge

- Interest in information and level of knowledge: Climate
- Interest in information and level of knowledge: Policies

Appendix: Communication

- Topic interest in general
- Consumer interests
- Media use
- Communication expectations

Method and sample

1

Methodology and sample

Method

Standardised online survey (CAWI)

Quota sample (gender, age, education and region)

The interviews were conducted in the national language.

Data collection

Interview duration: 20 to 28 minutes, depending on the country

The data collection was carried out by Sociotrend GmbH.

Resident population aged from 18 to 69 years

Target group

Sample size

Around 1,200 people

Survey period

20.04. - 28.07.2023

Survey contents

- Awareness of environmental, nature and climate protection issues
- Climate and environmentally conscious behaviour: Attitudes, barriers and motivators
- Attitudes towards change in lifestyles and economies: Necessity of change, Attribution of responsibility and political measures
- Interest in information and level of knowledge: climate change, ecological contexts and political measures

2 Problem awareness

Main findings

Problem awareness

Importance of environmental, nature and climate protection

 In a comparison of the 19 countries included in the survey, environmental, nature and climate protection is most frequently counted among the five most important topics in Canada and Denmark (50% and 49% respectively). In France (45%), Italy (43%), Germany (40%), the United States (40%) and Serbia (40%), environmental, nature and climate protection is also seen as a central political topic by at least 40% of the respondents. The relative importance of environmental, nature and climate protection is lower in Hungary (23%), Croatia (22%) and Greece (22%).

Relevance of environmental policy fields of action

• The relevance of the environmental policy fields of action surveyed is rated differently in some cases in the countries considered. For example, respondents in Germany most frequently rank the state of the Oceans (58%), climate change (55%) and waste in the environment and living environment (49%) among the five greatest challenges for the preservation of our livelihoods. In comparison, in Romania, the state of forests (62%), air pollution/quality (56%) and water pollution/quality (54%) are most frequently seen as the priority areas for environmental policy action.

Main findings

Problem awareness

Relevance of the topic Climate Change

In all countries considered, climate change is seen as a (very) important topic by large parts of the population. On a scale from 0 "completely irrelevant", to 10 "absolutely important", the scale average is above 7.0 in almost all countries. The lowest average was measured in Czechia (6.7) and the highest in Turkey (8.6), followed by Italy and Romania (8.1).

Attitudes towards climate change

- Across all countries, the vast majority of respondents agree that The destruction of nature endangers people and their livelihoods: At least 85% (in Denmark) and up to 97% (in Greece, Portugal and Serbia) agree "fully" or at least "somewhat" with this statement. At least 65% (in Germany and Czechia) and up to 93% (in Portugal and Turkey) say they are afraid of the consequences of climate change. On the other hand, the opinion that many things are very exaggerated regarding climate change's consequences is less frequently held in all countries. The range here is from 22% agreement in Portugal to 47% agreement in Romania, Czechia and the United States.
- When asked if there are more important problems than climate change in their own country, up to 77% (in Turkey) "fully agree" or "tend to agree", with the lowest level of agreement measured in Italy (46%). A preference for climate adaptation over climate mitigation is the strongest in France (64%). The weaker agreement is found in Germany (48%), Portugal (47%), Czechia (47%) and Poland (46%).

Main findings

Problem awareness

Consequences of climate change

- In 12 of the total of 19 countries included in the survey, the increase in extreme weather events scares the population the most: In Germany, Great Britain, Denmark, Sweden, Greece, Italy, Turkey, Croatia, Poland, Romania, Canada and the United States, up to 74% of respondents (in Italy) rank the increase in extreme weather events among the five consequences of climate change that scare them the most.
- In Portugal, France, Spain, Czechia and Hungary, the increase in extreme weather events ranks second. Here, respondents are more likely to fear water shortages than extreme weather events.

Relevance of the topic Climate Change

There are always discussions about climate change, i.e. global warming, which leads to environmental changes and changes in the everyday life of every individual (e.g. energy prices). How important do you personally consider this topic for your country?

3 Climate and environmentally-conscious behaviour

Climate and environmentally-conscious behaviour

Attitudes towards climate and environmentally conscious behaviour

- In all countries considered, at least 86% of respondents "fully" or "somewhat" agree that we all have to become active ourselves and start changing our way of life in order to maintain a liveable environment for us and the generations that follow. Furthermore, at least 81% of respondents would be willing to do more for environmental and climate protection if the resulting costs were distributed in a socially just manner. Slightly fewer, but still a majority in every country commit themselves to actively contributing to changing society. This goes from 53% in Czechia and 61% in Germany to 88% in Greece and 93% in Turkey.
- In Serbia 66% of the respondents "fully agree" that we all have to become active and start changing our way of life in order to maintain a liveable environment for us and the generations that follow. This compares to 47% in the United States, 46% in France, 45% in the UK, 42% each in Germany, Denmark and Slovakia, and 37% in Czechia.

Climate and environmentally-conscious behaviour

Barriers to climate and environmentally conscious behaviour

- At least 78% (in Germany) and up to 95% (in Turkey) are of the opinion that we should be willing to change our lifestyle for the benefit of the environment. However, at least 35% (in Portugal) and up to 79% (in Romania) (also) say they are only willing to do something to protect the climate if it does not affect their standard of living.
- At least 57% (in Italy) and up to 79% (in Slovakia) fear that a fundamental change in our way of living and doing business will come at a high personal cost ("Fully agree" or "Somewhat agree"). Furthermore, at least 50% (in Italy and the United States) and up to 73% (in Turkey) consider measures to protect the climate and the environment to be socially unjust, as they burden low-income earners in particular. At least 50% (in Canada) and up to 67% (in Poland, Romania and Slovakia) say that they personally lack the financial means to do something for climate protection.
- At least 61% (in Greece and Romania) and up to 84% (in Czechia) say they are annoyed when others try to tell them how to live ("Fully agree" or "Somewhat agree"). In addition, at least 34% (in Serbia) and up to 66% (in Turkey) complain that one will soon not be able to do anything at all if there are even more regulations for climate and environmental protection.

Climate and environmentally-conscious behaviour

- At least 69% (in Germany) and up to 90% (in Turkey) would be willing to do more to protect the environment if everyone acted this way ("fully agree" or "tend to agree"). However, at least 21% (in Portugal) and up to 56% (in Turkey) do not believe that their own behaviour can contribute significantly to environmental protection. At least 28% (in Denmark) and up to 54% (in Turkey) say that others should take the first step before contributing to climate protection themselves.
- At least 25% (in Italy) and up to 52% (in Czechia) find it difficult to shape their own lives in an environmentally and climate-friendly way ("Fully agree" or "Somewhat agree"). Furthermore, at least 45% (in Czechia) and up to 82% (in Serbia) say that the Poor infrastructure makes it impossible to give up the car. Furthermore, at least 14% (in Greece) and up to 47% (in Turkey) say they do not see the point of changing their behaviour for something that may happen in the future.
- At least 34% (in Portugal) and up to 72% (in Czechia) say that businesses that need a lot of energy for their production cannot implement strict climate protection requirements ("fully agree" or "tend to agree"). Furthermore, at least 32% (in Serbia) and up to 52% (in Slovakia) say that preserving jobs is more important than climate and environmental protection. At least 25% (in Serbia) and up to 56% (in Romania) believe that combating climate change is detrimental to domestic businesses.

Climate and environmentally-conscious behaviour

• At least 42% (in Czechia) and up to 64% (in France and Portugal) think that businesses know best how to implement the necessary change ("Fully agree" or "Somewhat agree"). Furthermore, at least 24% (in Serbia) and up to 71% (in Turkey) think that science and technology will solve the problem of climate change without us having to fundamentally change our way of life.

Motivators of climate and environmentally conscious behaviour

- Across all countries, there is a high level of general agreement with the motivators. For example, in all countries at least four fifths of the respondents are "completely" or "rather" of the opinion that more environmental protection also means better quality of life and health for all. Also against the background of the tendency towards socially desirable answers, it is therefore particularly worthwhile to look at the values at the highest level of agreement:
- At least 25% (in Czechia) and up to 49% (in Portugal) feel strongly connected to nature ("Fully agree"). Furthermore, at least 37% (in Denmark) and up to 72% (in Serbia) feel that spending time in nature significantly enhances their quality of life.

Climate and environmentally-conscious behaviour

- At least 44% (in Poland and Czechia) and up to 72% (in Portugal) believe that each individual has a responsibility to leave a liveable environment for future generations ("Fully agree"). Moreover, at least 36% (in Germany) and up to 68% (in Portugal) believe that environmental protection is a matter of decency and civic duty. That more environmental protection also means better quality of life and health for all is said by at least 34% (in Denmark) and up to 72% (in Portugal). At least 21% (in Slovakia) and up to 49% (in Turkey) feel personally responsible for the preservation of nature and the environment.
- At least 33% (in Czechia) and up to 54% (in Turkey) see the industrialised countries as having a special responsibility for climate protection, as they have been the main cause of climate change ("Fully agree"). In addition, at least 22% (in Czechia) and up to 46% (in Portugal) say they feel better when they buy products that have less impact on the environment and climate.
- At least 22% (in Czechia) and up to 46% (in Italy) believe that our businesses need to become more climate-friendly, otherwise there is a risk of economic damage ("Fully agree"). Furthermore, at least 16% (in Czechia and Slovakia) and up to 35% (in Turkey) believe that switching to environmentally and climate-friendly products and production processes offers great employment opportunities. At least 15% (in Czechia) and up to 44% (in Turkey) believe that a consistent policy to protect the environment will have a positive impact on the competitiveness of businesses in the future.

4 Changing lifestyles and economies

Main findings

Changing lifestyles and economies

Assessing the need for change

• To the question of whether a fundamental change in the way of business and life is necessary in their own country, more than two-thirds of the respondents in all the countries surveyed answered "Yes, definitely" or "rather yes" The highest levels of unreserved agreement were found in Romania ("Yes, definitely": 56%), Serbia (58%) and Turkey (58%). The lowest values were measured in Sweden ("yes, definitely": 24%) and Denmark (19%).

Attribution of responsibility

- The question of which actors are doing too little to tackle climate change is answered very differently in the countries under consideration. For example, in Croatia and Serbia, more than four-fifths of the respondents (83% and 86% respectively) are of the opinion that businesses are doing (much) too little. In Slovakia 60% think so, in the United States 57% and in Czechia (52%).
- When it comes to the question of which actors can contribute most to overcoming the crisis, the answers vary greatly depending on the country. For example, 70% of respondents in the UK rank their government among the three most influential actors in addressing the climate and environmental crisis, while in France only 29% of respondents attribute an influential role to their government.

Main findings

Changing lifestyles and economies

Attitudes towards policies

- At least 70% (in Czechia) and up to 95% (in Greece, Turkey and Serbia) are in favour of providing more financial support
 to people with low incomes if the costs of electricity and heating or mobility increase because of climate protection
 measures ("Fully agree" or "Somewhat agree"). In addition, between 80% (in the United States) and up to 96% (in Greece
 and Turkey) are of the opinion that politicians should pay much more attention to a socially just design of the change in
 the way of business and life. At the same time, at least 51% (in Hungary) and up to 82% (in Portugal) feel uneasy at the
 idea of fundamental change.
- At least 68% (in the US) and up to 88% (in Croatia) believe that low-income, ethnic or other minorities should not be more affected by environmental pollution than other population groups ("Fully agree" or "Somewhat agree").
- At least 80% (in the United States) and up to 96% (in Turkey) are in favour of support programmes that help businesses to switch to climate-friendly production processes and products ("Fully agree" or "Tend to agree"). Furthermore, at least 74% (in Czechia) and up to 92% (in Serbia) believe that businesses need clear guidelines from the state in order to become climate neutral. At least 72% (in Germany) and up to 93% (in Portugal) say that Politicians should exert much more pressure on businesses to achieve climate-friendly production methods. In addition, at least 56% (in Spain) and up to 84% (in Portugal) are of the opinion that politicians follow the guidelines of industry and businesses too closely.

Main findings

Changing lifestyles and economies

- At least 72% (in Czechia) and up to 95% (in Portugal) support a more consistent switch to renewable energy ("Fully agree" or "Somewhat agree"). At least 56% (in Hungary) and up to 82% (in Greece) agree with the statement "It annoys me that climate policy is controlled by the EU, because this does not sufficiently take into account the special features of our country"
- At least 71% (in Germany) and up to 93% (in Turkey) think that, above all, strict and consistent laws are needed to preserve an environment worth living in for us and future generations ("Fully agree" or "Somewhat agree"). However, at least 63% (in Spain) and up to 83% (in Turkey) (also) say that there are already enough guidelines for a fundamental change in the way we do business and live if these were implemented, we would be on the right track.
- At least 45% (in Greece and Serbia) and up to 85% (in Turkey) believe that structural change measures should be enforced even if jobs are lost as a result ("Fully agree" or "Somewhat agree"). Meanwhile, at least 68% (in Canada and Sweden) and up to 90% (in Turkey) say that jobs affected by structural change should be maintained for as long as possible if there are no suitable alternatives.

Main findings

Changing lifestyles and economies

Assessment of measures in nature, environmental and climate protection

- In the countries surveyed, the values for fundamental support ("I fully support" or "I tend to support") for the measures asked about in nature, environmental and climate protection are often over 90%. For example, up to 97% of respondents are generally in favour of reducing the price of public transport. An examination of the highest level of agreement shows, however, that the proportion of those who "fully and completely" support a measure varies greatly depending on the country surveyed:
- <u>Mobility</u>: At least 39% (in the US) and up to 74% (in Portugal) support reducing public transport fares ("I fully support"). At least 35% (in the US) and up to 70% (in Portugal) are in favour of expanding the transport network and the frequency of public transport. More charging points for electric or hybrid vehicles are supported by at least 18% (in Czechia) and up to 56% (in Portugal), the promotion of electric vehicles by at least 15% (in Czechia) and up to 57% (in Portugal), a Carbon tax on airline tickets by at least 16% (in Romania) and up to 33% (in Denmark), and the introduction of a car toll (so that someone who drives a lot also has to pay more) by at least 12% (in Greece, Italy and Poland) and up to 32% (in Turkey).

Main findings

Changing lifestyles and economies

- <u>Energy</u>: At least 24% (in France) and up to 61% (in Serbia) are in favour of building more wind turbines ("I fully support"). At least 24% (in Poland) and up to 61% (in Portugal) are in favour of mandatory solar for public buildings and new private buildings, and at least 15% (in Czechia) and up to 52% (in Portugal) are in favour of cooperative membership.
- <u>Technology/innovations</u>: At least 36% (in Czechia) and up to 65% (in Portugal) are in favour of more support for the development of climate-friendly products and technologies ("I fully support"). At least 30% (in Czechia) and up to 68% (in Portugal) are in favour of labelling climate-friendly products. At least 20% (in Czechia) and up to 42% (in Turkey) are in favour of reducing subsidies that are harmful to the climate, and at least 17% (in France) and up to 42% (in Turkey) are in favour of making products that are harmful to the climate more expensive.
- <u>Education</u>: At least 42% (in France, the UK and Czechia) and up to 73% (in Greece) support an improvement of school education in the field of environmental and climate protection ("I fully support"). At least 32% (in Czechia) and up to 63% (in Portugal) support training or further training (or retraining) for workers in jobs that will no longer be needed in the future.

Main findings

Changing lifestyles and economies

• <u>Housing</u>: At least 33% (in Sweden) and up to 67% (in Serbia) support state support for the renovation of buildings for thermal insulation ("I fully support"). At least 30% (in Denmark) and up to 69% (in Serbia) support government support for private households to use renewable energy. Financial support for cost-efficient heating systems (e.g. heat pumps) is supported by at least 34% (in Czechia) and up to 63% (in Serbia and Hungary), and legal regulations on the energy efficiency of electrical household appliances are supported by at least 23% (in Czechia) and up to 60% (in Portugal).

General attitudes towards the energy/heat transition

 Across all countries, there is a high level of general agreement ("fully agree" or "tend to agree") with the attitudes towards the energy and heat transition. For example, in all countries, more than four-fifths of respondents "fully agree" or "tend to agree" that workers affected by the transition of electricity and heat supply to renewable energy (e.g. job loss) should be supported in retraining for alternative jobs.

Main findings

Changing lifestyles and economies

- When looking at the highest level of agreement ("Fully agree"), significantly greater differences can be seen in the country comparison:
- At least 41% (in Denmark) and up to 71% (in Serbia) agree that workers affected by the switch of electricity and heat supply to renewable energy (e.g. job loss) should be supported in retraining to alternative jobs ("Fully agree").
 Furthermore, at least 20% (in Denmark) and up to 69% (in Serbia) think that the affected workers should be financially supported (compensation, severance payments, etc.).
- At least 32% (in Czechia) and up to 78% (in Serbia) believe that private households that want to use renewable energy (e.g. solar electricity, solar heating or heat pump) should be financially supported ("Fully agree"). Furthermore, at least 23% (in Czechia) and up to 65% (in Serbia) agree that the development of energy communities should be supported by the government.
- According to at least 17% (in Denmark) and up to 56% (in Serbia), regions and municipalities affected by the conversion of electricity and heat supply to renewable energy (e.g. coal mining, natural gas, oil regions) should receive financial support ("Fully agree"). Furthermore, at least 24% (in Italy) and up to 50% (in Serbia and Romania) think new industries should be actively established in the affected regions and municipalities.

Main findings

Changing lifestyles and economies

• At least 23% (in Czechia) and up to 58% (in Serbia) believe that citizens should participate in public and political life (e.g. citizens' forums, planning advisory boards) in order to help shape the community ("Fully agree").

Active participation in shaping the energy supply

- In all the countries considered, at least 46% of the respondents can basically imagine taking an active part in shaping the energy supply of their community ("yes, definitely" or "rather yes"). The highest unreserved approval ratings were found in Serbia ("yes, definitely": 36%) and Turkey (37%). Significantly lower values were recorded in Czechia ("Yes, definitely": 12%), Denmark (12%), Great Britain (13%), Germany (14%), Italy (14%), Slovakia (14%), Poland (15%), Hungary (17%) and France (17%).
- Asked whether they could imagine generating their own energy, at least two thirds of the respondents in the countries surveyed answered "Yes, definitely", "rather yes" or "I already generate my own energy" Portugal (60%), Greece (64%) and Turkey (67%) are particularly likely to say that they can "definitely" imagine generating their own energy. Respondents in Canada ("yes,

definitely": 37%), France (36%), Great Britain (36%) and Poland (32%).

Main findings

Changing lifestyles and economies

Attitudes towards the construction of a solar/wind park in the municipality

- In 17 of the total of 19 countries considered, the proportion of those who would oppose the construction of a solar park even if the profits it generates benefit the community is less than 10%. In the United States the share is 11%, in Czechia 14%.
- In all countries included in the study, the construction of a solar park in the community is evaluated more positively than the construction of a wind park. This is especially true for France. There, every third person opposes the construction of a wind farm, while the construction of a solar park is only opposed by 7% (provided that the profits generated by it benefit the community).

Assessment of measures for a heating turnaround

• In order to fight climate change, it is necessary to heat differently in the coming years. In all countries surveyed, most respondents think this should be done through more public subsidies for climate-neutral technologies and the replacement of heating. On the other hand, the share of those in favour of bans is at most 14% (in France, Portugal and Turkey), and the share of those in favour of higher prices for oil, gas and coal is at most 15% (in Turkey). Support for none of these options is above average in Germany (21%), Denmark (21%), Sweden (21%), France (22%), Slovakia (22%), the United States (22%) and Czechia (26%).

Assessing the need for change

In your opinion, is there a need for a fundamental change in our way of doing business and living in your country?

Interest in information and level of knowledge

Main findings

Interest in information and level of knowledge

Interest in information and level of knowledge: Climate

In all the countries considered, at least two thirds of the respondents are basically interested in the topic of climate change ("am very interested" or "tend to be interested"). A "very great" interest is most frequently expressed in Turkey ("am very interested in it": 43%), Italy (45%) and Greece (47%). In Slovakia (16%), Czechia (15%) and especially in Poland (3%), the share of those who are "very" interested in the topic of climate change is significantly lower.

Main findings

Interest in information and level of knowledge

Interest in information and level of knowledge: policies

- In 16 of the 19 countries included in the survey, less than 10% of respondents feel "very well" informed about policies for a change towards a more climate and environmentally friendly business. In Canada, exactly 10% feel "very well" informed, in the United States it is 17% and in Turkey 20%. The share of those who say they feel very or at least somewhat well informed ranges from 34% (in Serbia) to 70% (in Turkey).
- Similarly, when asked to what extent policies for a change towards a more climate and environmentally friendly
 economy are sufficiently explained and clarified and explained and clarified: In 16 countries, less than 10% answer "yes,
 politicians are sufficiently explained and clarified and explained and clarified" Only in Canada (10%), the United States
 (14%) and Turkey (19%) is the figure slightly higher. The share of those answering the question with "yes" or "rather yes"
 ranges from 16% (in Serbia) to 47% (in Turkey).
